

ABSTRACT OF THE DISCLOSURE

object

In a data transmitting method, a data transmitting system, data receiving method and a receiving terminal, specified data can be transmitted only to specified receiving terminal means by assigning unique terminal information to the receiving terminal means. According to the present invention, when data is transmitted from a transmission means to a receiving terminal means, unique terminal information to specify and identify one of plural receiving terminal means as a destination of transmission and an update program to change the processing of the receiving terminal means are transmitted from the transmission means to the receiving terminal means, the unique terminal information and the update program are received by the above receiving terminal means, and the unique terminal information and the update program are stored in prescribed storage means. Thus the processing is updated.
